Education

Dr. B. R. Ambedkar National Institute of Technology, Jalandhar Jalandhar, Punjab
Bachelor of Technology in Instrumentation and Control Engineering | ***CGPA: 8.44/10*** *2025 – 2029 (Expected)*
Relevant coursework: Linear Algebra, Multivariable Calculus, Numerical Methods, Analog and Digital Electronics, Network Theory, Python Programming

Experience

Full-Stack Developer – XCEED Aug 2026 – Present
Academic platform for NIT Jalandhar (AMS) | React, Node.js, Express, MongoDB, JWT *NIT Jalandhar*

- Core contributor to the **Learning module** of XCEED, the institute's in-house platform for attendance, timetables and teaching (web, Android and iOS), with **170+ GitHub contributions** to the team's repositories in 2026.
- Replaced PDF uploads with **in-browser running and auto-checking** of students' Python and C notebook submissions using **hidden test cases**, and added one-click PDF download of every submission for faculty.
- Built a **GitHub-style attendance contribution map** for students, with per-class present/absent lines and holidays and weekends marked separately.
- Built **student onboarding**: bulk import of student accounts from the institute's ERP roster (.xlsx), an admin roster with email invitations, and a tool to merge duplicate departments.
- Integrated the module with the **timetable**: a student timetable view, classroom rooms pulled from the timetable, and a **node-cron job** that reminds faculty at 9 AM on working days to set up missing classrooms.
- Built **quizzes** with the timer enforced on the server and answer keys never sent to the browser; fixed **auth issues** (signed-in user no longer stored in localStorage, JWT cookie actually cleared on logout); added **complex-number answers** to tutorials and assignments and 30-second autosave to teacher editors.

Projects

Darkroom – Photo Editing Service | *Node.js, Express, MongoDB, Sharp, React, Docker* | Live | Source 2026

- Browser photo editor backed by a REST API: rotate, flip, crop, resize, grayscale, sepia, text watermark, and JPEG, PNG, WebP or AVIF conversion through a **Sharp pipeline**, with live preview and a single server-side Apply.
- Non-destructive versions de-duplicated by a **sha256 fingerprint** of photo + edits; JWT auth, Zod validation, **per-user rate limiting**; EXIF/GPS stripped and files auto-deleted after 12 hours by an hourly cleanup job.
- Deployed across Vercel, Render (Docker), Supabase Storage and MongoDB Atlas, with API tests running in **GitHub Actions CI**.

LitGit – LeetCode to GitHub Sync | *JavaScript, Chrome Extension (Manifest V3), GitHub API* | Source 2026

- Chrome extension that **automatically commits every accepted LeetCode solution**, with its problem statement and runtime/memory stats, to a GitHub repository.
- Bulk-sync dashboard imports all past solutions through a background worker tab, with **rate limiting** to stay within GitHub API limits; works on LeetCode.com and LeetCode.cn.

CineScope – Movie, TV and Anime Explorer | *React, TMDB API, AniList GraphQL* | Live | Source 2026

- Unified search across movies, TV and anime from two APIs, with in-app trailers (React Portals) and a sortable watchlist; deployed on Vercel.

Technical Skills

Languages: C++, Python, JavaScript, C, Java (basics)
Core CS: Data Structures & Algorithms, Object-Oriented Programming
Frontend: React, Vite, Tailwind CSS, Chakra UI
Backend: Node.js, Express, REST APIs, JWT, MongoDB
Tools: Git, GitHub Actions, Docker, Linux, Chrome Extensions
Data & AI: NumPy, pandas (currently learning machine learning)

Achievements & Activity

- Qualified **JEE Advanced 2025**.
- Selected after the **Smart India Hackathon (SIH) 2026** internal round at NIT Jalandhar.
- Solved **325+ LeetCode problems** in C++ (157 Easy, 158 Medium, 12 Hard); 100 Days Badge 2026.
- **315 GitHub contributions** in the past year, **172** of them to XCEED's private team repositories.
